

# Intraday Herding and Attention around the Clock

Stefan Scharnowski<sup>1</sup> Yanghua Shi<sup>1</sup>

<sup>1</sup>University of Mannheim

Crypto Asset Lab Conference  
Milan, November 2021

# Investor Herding

- Herding describes the inclination of investors to mimic the investment decisions of other investors
- When herding, investors potentially disregard private information and instead follow the market
- Various reasons & explanations
  - Rational
  - Behavioral Bias
- Might lead to irrational price bubbles

# Literature

## **Herding has been documented in many markets**

- Across asset classes: Equities (Christie and Huang, 1995), ETFs (Gleason et al., 2004), FX (Park, 2011), Corporate Bonds (Cai et al., 2019), and Options (Bernalles et al., 2020)
- In various countries (Chang et al., 2000)
- In different industries and sectors (Choi and Sias, 2009; Gebka and Wohar, 2013)
- For retail (Hsieh et al., 2020) and institutional investors (Sias, 2004; Kremer and Nautz, 2013)
- Using daily and higher frequency data (Gleason et al., 2004; Hsieh, 2013; Andrikopoulos et al., 2017; Cai et al., 2019)
- And also in the cryptocurrency market, though there is no agreement on the size or even direction of the effect (Bouri et al., 2019; Vidal-Tomás et al., 2019; da Gama Silva et al., 2019; Kallinterakis and Wang, 2019; Ballis and Drakos, 2020; Kaiser and Stöckl, 2020)

# Contribution

## We reconsider investor herding in the cryptocurrency market

- The crypto market is particularly interesting in the context of herding
  - Decentralized, global, and open around the clock
  - Relatively little fundamental information available
  - Young and developing, potentially more inefficiencies
  - Different investor base, many retail traders
- Using intraday data, we ...
  - ... pick up potential short term herding
  - ... document intraday patterns in herding and trading
  - ... analyze the hardly investigated determinants of investor herding

# Contribution

## We link intraday herding to investor attention

- Internet search volume captures the attention of retail investors (Da et al., 2011; Joseph et al., 2011; Meshcheryakov and Winters, 2020)
- Social media data proxies for investor sentiment, e.g. Twitter (Behrendt and Schmidt, 2018)
- While most studies focus on the level of attention, we additionally investigate attention dispersion
  - Attention co-movement is positively related to stock returns (Drake et al., 2017)
  - Sentiment dispersion within tweets is related to volatility (See-To and Yang, 2017)
  - No such study on the crypto market

# Empirical Approach

- Calculate cross-sectional absolute deviation from market index

$$\text{CSAD}_t = \frac{1}{N} \sum_{i=1}^N |R_{i,t} - R_{m,t}|$$

- Regress CSAD on absolute and squared market returns

$$\text{CSAD}_t = \alpha + \beta_1 |R_{m,t}| + \beta_2 R_{m,t}^2 + \beta_3 X_t + \varepsilon_t$$

- Include interactions with hourly indicator variables to analyze intraday herding

$$\text{CSAD}_t = \alpha + \sum_{h=0}^{23} \beta_{1,h} |R_{m,t}| D_{h,t} + \sum_{h=0}^{23} \beta_{2,h} R_{m,t}^2 D_{h,t} + \varepsilon_t$$

- Negative  $\beta_2$  indicates herding around the market
- Repeat for subsamples, using day/intraday FE, ...

# Data

- 13 cryptocurrencies, prices against USD
- Sample period: June 2017 – November 2020
- All data in hourly resolution
- Cryptocurrency exchange rate data from Bittrex (Kraken for robustness)
- # Transactions recorded on each blockchain
- Attention proxies
  - Google search volume (Information demand)
  - Reddit submissions and comments (Information supply)

$$\text{MarketLevel}_t = \frac{1}{N_t} \sum_{i=1}^{N_t} \ln(1 + S_{i,t})$$

$$\text{MarketDispersion}_t = \frac{1}{N_t} \sum_{i=1}^{N_t} |\ln(1 + S_{i,t}) - \text{MarketLevel}_t|$$

# Herding at high(er) Frequency and Investor Attention

	(1)	(2)	(3)	(4)	(5)	(6)
Market Return	0.266*** (34.88)	0.206*** (26.60)	0.148*** (22.72)	0.178*** (27.83)	0.148*** (23.27)	0.142*** (22.28)

Date FE	—	—	✓	—	✓	✓
Intraday FE	—	—	—	—	—	✓
Observations	29083	29083	29083	29083	29083	29083
Adj. $R^2$	0.239	0.394	0.574	0.470	0.582	0.588

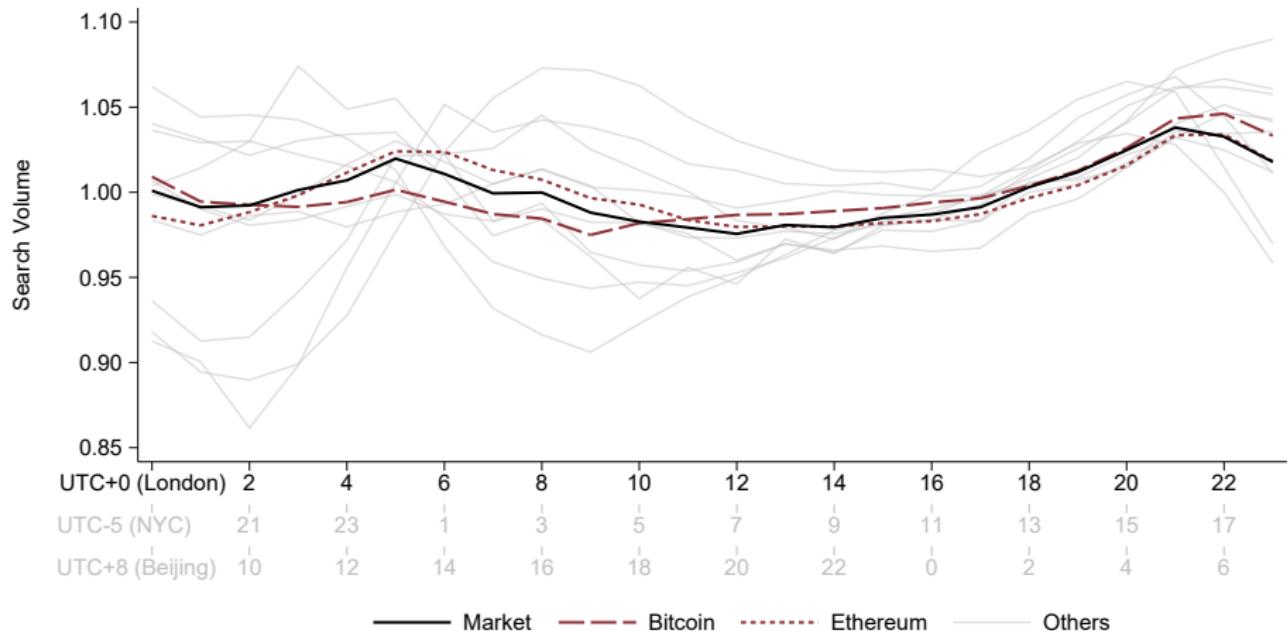

- There is herding in cryptocurrency markets at the daily and intraday level
- Herding is negatively related to both level and dispersion of attention

# Herding in Different Market States

	Up Markets	Down Markets	High Market Volatility	Low Market Volatility
Market Return	0.183*** (18.49)	0.120*** (14.47)	0.137*** (15.78)	0.169*** (16.37)
Market Return <sup>2</sup>	-1.081*** (-2.97)	-0.433** (-2.05)	-0.498** (-2.27)	-1.582*** (-4.14)
Trading Vol.	0.029*** (10.50)	0.020*** (7.47)	0.020*** (7.49)	0.027*** (7.89)
Blockchain Trans.	0.158*** (6.73)	0.104*** (4.55)	0.187*** (5.95)	0.105*** (5.68)
Search Vol. <sub>Level</sub>	0.274*** (9.66)	0.279*** (10.60)	0.336*** (7.61)	0.233*** (9.78)
Search Vol. <sub>Dispersion</sub>	0.259*** (7.10)	0.282*** (8.77)	0.369*** (6.52)	0.213*** (8.04)
Reddit Posts <sub>Level</sub>	0.018*** (2.83)	0.022*** (4.08)	0.018** (2.22)	0.019*** (3.44)
Reddit Posts <sub>Dispersion</sub>	0.041*** (3.16)	0.036*** (3.25)	0.037** (2.42)	0.034*** (3.01)
Date FE	✓	✓	✓	✓
Observations	14989	14091	11411	17590
Adj. <i>R</i> <sup>2</sup>	0.563	0.615	0.552	0.589

- We find significant herding in all market states
- Herding is stronger in up markets and when market volatility is low

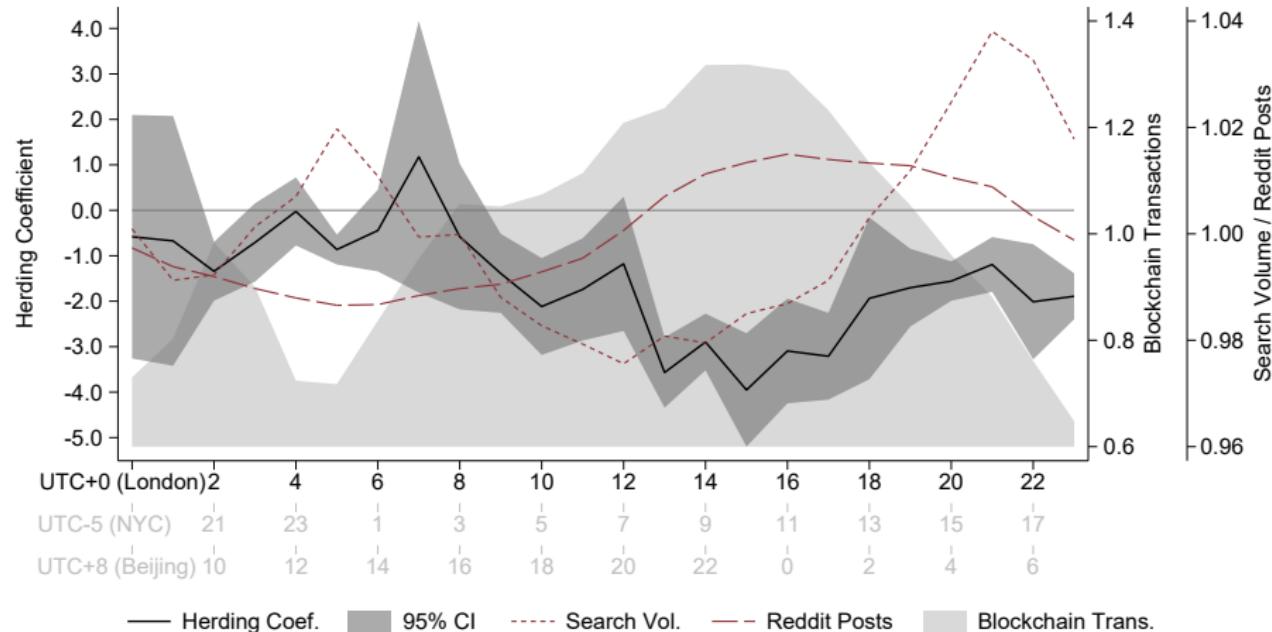

# Intraday Patterns in Search Volume

# Intraday Patterns in Reddit Posts

# Intraday Patterns in Herding Behavior

## Robustness Tests

- There is herding both during weekdays and on the weekend
- Results are robust to different market index weighting schemes
  - Value weighting
  - Only BTC as market (transfer currency)
- Including signed market returns or market volatility likewise does not change the results

# Conclusion

We document significant return herding in cryptocurrencies that ...

- ... is stronger during up markets
- ... is stronger during markets with low volatility
- ... is positively related to the level and dispersion of investor attention
- ... fluctuates throughout the day
- ... is consistent with the presence of retail traders

**Thank You!**
